Location :

Synopsis :

1. Scope

This Equipment Note gives guidance on the equipment required for a Works Department carrying out building and engineering maintenance in District General and Teaching Hospitals and separate large industrial complexes serving an area comprising several groups of hospitals. The note relates to six sizes of departments, i.e.

1.1 to serve a group containing 300— 600 beds
1.2 to serve a group containing up to 800 beds
1.3 to serve a group containing up to 1200 beds
1.4 to serve a group containing up to 2000 beds
1.5 to serve a group containing up to 3000 beds
1.6 to serve a group containing up to 4000 beds

2. General Considerations on the Use of Equipment Notes

2.1 Equipment Note No. 1 (Equipping a Hospital Building) provides an introduction to the series of departmental Equipment Notes, advice on their application, and guidance on the task of preparing equipment schedules for individual building projects. The departmental Equipment Note is intended to be used within the general planning framework set out in Equipment Note No. 1 and in the manner described therein. The equipment listed in this note is classified into four groups:—

Group 1: Items (including engineering terminal outlets) supplied and fixed within the terms of the Building Contract.

Group 2: Items which have space and/or building construction and/or engineering service requirements and are fixed within the terms of the Building Contract but supplied under arrangements separate from the Building Contract.

Group 3: As Group 2 but supplied and fixed (or placed in position) under arrangements separate from the Building Contract.

Group 4: Items supplied under arrangements separate from the Building Contract, possibly with storage implications but otherwise having no effect on space or engineering service requirements.

It is recommended that these classifications be used in all stages of planning.

3. Special Considerations in Respect of this Note

3.1 The equipment detailed in this Note is regarded as suitable to the department described in Building Note No. 34 and has been listed in work area, room or space sequence conforming to that Building Note. The lists are drawn up in such a way that they can be applied to departments of varying sizes serving groups containing from 300 to 4,000 beds and of varying designs within the context of the Building Note. It is emphasised that the scale of provision in this Note is appropriate to the functional assumptions described in paragraph 3 of Hospital Building Note No. 34. Lesser commitments require suitable reductions to the recommended scale. Similarly, storage provision will depend upon the logistics policy adopted locally.

3.2 No provision has been made in this Note for the servicing of specialised equipment such as that used in diagnostic X-ray and radio-therapy departments. The Hospital Equipment Note for relevant departments will recommend appropriate equipment for specialised servicing.

3.3 Some minor items have been grouped under general headings and these have been given aggregated cost allocations in arriving at the cost guide figures. This has been done to avoid a detailed listing of relatively inexpensive small items and to afford a degree of flexibility in their choice.

3.4 Some fixed items of equipment (Group 1) have already been mentioned (and costed) in the Building Note, but it has been thought useful to include them again in the Equipment Note which represents the results of a comprehensive review of the requirements. Reference should be made, however, to the Building Note—Part V Engineering Services—for further information on the mechanical services and electrical installation. It is particularly important that before purchasing equipment requiring services there should be adequate consultation to ensure compatibility. Structural elements, floor coverings, non-specialised heating and light fittings and similar items which are basic to any building are not included in the Equipment Note: neither are window blinds and window curtain tracks since these requirements will vary with local circumstances.

3.5 It is realised that the equipment requirements in particular departments may differ from the recommendations because of the nature of work undertaken and the techniques employed; and some variations will often be necessary within the Basic Lists. As indicated in Equipment Note No. 1, Section V, the requirements will need to be examined in consultation with the head of the department or main users.

3.6 Throughout the schedule, for the sake of uniformity, references to dispenser, paper towels are associated with holders, sack, free standing. Suitable adjustments will need to be made where linen towels are to be used.

3.7 In all cases where imperial measurements have been quoted the appropriate metric equivalents may be used.

3.8 The gardening equipment listed in paragraph 5.6.2 of this Note is based on the requirements for small acreage hospital grounds. It is accepted that the planned provision and intended usage of gardens and grounds will determine the equipment appropriate to each project.

3.9 Tools

The hand tools listed in this Note are supplementary to those which are considered basic to each trade and

normally provided by tradesmen in accordance with current industrial practice.

3.10 Safety

3.10.1 The Works Department is classified as a high fire-risk area and, whilst certain fire fighting equipment has been included in the Note under Departmental Items, particular attention should be paid to the recommendations contained in Hospital Technical Memorandum No. 16 and Hospital Design Note No. 2. Consultation with the local fire authority is essential.

3.10.2 Attention is also drawn to the general provisions for safety detailed in the Factories Act 1961 Part II and Hospital Technical Memorandum No. 21 of which Appendix 6 has particular relevance.

3.11 Damage by equipment to buildings

Many items of equipment are potential causes of recurring damage to the fabric of NHS buildings and to other equipment. Damage can be minimised not only by incorporating protective materials in the building structure but also by ensuring that the equipment selected is designed to eliminate, as far as is practicable, those features which are liable to cause damage. Particular attention is drawn to BS 4322/68 which sets out recommendations for the buffering of hospital vehicles such as trolleys and refers less specifically to other categories of equipment. Precautions should also be taken to prevent damage caused by projections from stationary equipment, particularly where the angle of projection may be altered as, for example, the angle of a balkan beam fitted to a tilting bed.

Early co-operation with the architect and designers is essential.

3.12 It is for individual hospital authorities to make rules about smoking in the hospitals under their control and management (see Hospital Memorandum HM(71) 53) and accordingly no reference is made to ashtrays or to smoking throughout this Note.

4. Cost

4.1 Guidance on the cost of equipping this department to the standard shown in this schedule is given against the list of equipment, (Groups 2, 3 and 4 only) for each work area, room or space. Departmental cost summaries for a range of sizes relating to the number of beds served are shown in Appendix 7.1 to this Note. In using these cost figures, the considerations referred to in Section IV of Equipment Note No. 1 together with paragraph 2.1 of this Note, should be borne in mind.

4.2 Costs are based on prices prevailing at the time of compilation of this Note. Departmental Cost Summaries are revised in accordance with the movement of prices and are promulgated by the Department as Equipment Cost Allowance Guides.

Health Equipment Note No. 34

Appendix 7.1

Works Department

DEPARTMENTAL COST SUMMARY

7.1 To be read in conjunction with the explanatory notes in Section 4 of this Equipment Note and Section IV of Hospital Equipment Note No. 1.

The room cost guide figures for basic equipment (Groups 2, 3 and 4) applied to standard schedules of basic accommodation for departments of various sizes, suggest departmental equipment cost totals of the following order.

Number of beds served					
300–600	*601–800*	*801–1200*	*1201–2000*	*2001–3000*	*3001–4000*
£6,875	£7,200	£7,500	£10,250	£11,100	£11,600

In these totals no account is taken of the following:—

1. Equipment required for "basic accommodation" additional to the basic list, some guidance on which is given under the appropriate rooms;
2. Equipment required in "additional accommodation", cost guides for which are shown on the appropriate pages as for basic accommodation.

Appendix 7.2

BRITISH STANDARDS

Guidance is given below on the British Standards considered appropriate for certain items listed in this Equipment Note. However, it is not the intention to imply that an item in a material other than that to which the British Standard relates is necessarily inappropriate.
